In the Claims:

Please amend the claims as follows:

1. (currently amended) A graphical user interface system for efficiently navigating among and selecting from different selectable options presented displayed on a display screen, said display screen being associated with a client device and means for user input, wherein the graphical user interface system comprising:

a scrollable menu is provided for selectively displayed on the display screen through user input being presented to the display screen, which scrollable menu comprises a series of panels representing bookmarks and/or bookmark folders representative of the different selectable options, which series of panels when presented to displayed on the display screen will appear to occupy a two-dimensional space extending in an approximate semi-circular fashion along the a bottom and the adjacent sides of the display screen such that additional information can be presented for viewing on the a remainder of the display screen; and

a selection cursor is provided for being presented to displayed on the display screen overlaid on one panel presented at the bottom of the display screen, which selection cursor through user input is selectively scrollable through to a next panel in the series of panels in discrete steps, distinctly indicating only one panel at a time and, which selection cursor upon being scrolled to a panel appearing further up either side of the display screen than the panels displayed at the bottom thereof is arranged to cause the indicated panel to be pulled down using a simulated gravitational pull as the load of the selection cursor is brought to the panel and stopped in a position at the bottom of the display screen and the whole series of panels to be scrolled

along with it the indicated panel, said user interface system further providing for user input for performing a selection of selecting the indicated panel indicated by said selection cursor.

2. (currently amended) The graphical user interface according to claim 1, wherein further comprising:

an information field is provided for being presented to displayed on the display screen,

the information field comprising providing additional information regarding the selectable option

of the indicated panel indicated by said selection cursor.

- 3. (currently amended) The graphical user interface according to claim 1, wherein the a transport speed of the series of panels when scrolled is arranged to be increased increases linearly the further moving up the panels appearing at either side the sides of the display screen as the a user attempts to scroll scrolls the selection cursor.
- 4. (currently amended) The graphical user interface according to claim 1, wherein the <u>a</u> transport speed of the series of panels when scrolled is arranged to be dependent on the <u>a</u> frequency of user input commands for scrolling the selection cursor up the panels appearing at <u>either side</u> the <u>sides</u> of the display screen.
- 5. (currently amended) The graphical user interface according to claim 1, wherein it further provides for further comprising:

an editing mode configured to receive user input for editing the bookmarks and/or bookmark folders representative of the different selectable options.

6. (currently amended) The graphical user interface according to claim 1, wherein further comprising:

a first information symbol is provided for being displayed to on the display screen adjacent to the selection cursor when the indicated panel indicated by said selection cursor is comprises a panel representing a bookmark folder, said first information symbol indicating a path to a sub-menu comprising a series of additional panels representing the bookmarks and/or bookmark folders represented by the indicated panel indicated.

- 7. (currently amended) The graphical user interface according to claim 6, wherein upon user input for performing a selection of the panel representing a bookmark folder, the sub-menu comprising a series of additional panels representing the bookmarks and/or bookmark folders represented by the panel selected are provided for being displayed to on the display screen, replacing the a previously displayed menu.
- 8. (currently amended) The graphical user interface according to claim 7, wherein further comprising:

a second information symbol is provided for being displayed to on the display screen adjacent to the selection cursor when the indicated panel indicated by said selection cursor is comprises a panel of said sub-menu, said second information symbol indicating a return path to the previous previously displayed menu.

9. (currently amended) The graphical user interface according to claim 8, wherein the

panel representing the bookmark folder is provided for being displayed to on the display screen below the panels of said sub-menu, indicating to the user the panel used to enter said sub-menu.
